MA12: Get Information from Sensors การอ่านค่าจากเซนเซอร์

1

Outline

- Location by using GPS: Latitude, Longitude เช่น 14.0771, 100.5935
- Accelerometer: ความเร่งเชิงเส้นตามแกน x, y, z มีหน่วยเป็น m/s^2
- Ambient Temperature --- อุณหภูมิสภาพแวดล้อมรอบเครื่อง มีหน่วยเป็น $^{\circ}C$
- Gravity: ค่าแรง g ตามแนวแกน x, y, z มีหน่วยเป็น m/s^2
- Gyroscope: ความเร็วเชิงมุมตามแกน x, y, z มีหน่วยเป็น rad/s
- Light: มีหน่วยเป็น lux เช่น 40.0 lux
- Linear Acceleration: ความเร่งเชิงเส้นไม่รวมแรง g
- Magnetic Field: x, y, z มีหน่วยเป็น Micro Tesla
- Orientation: ทิศทาง x, y, z มีหน่วยเป็น $^{\circ}$
- Pressure: มีหน่วยเป็น mb, mmHg, atm, Pascal
- Proximity: วัดความใกล้ มีหน่วยเป็น cm เช่น 8.0 cm
- Relative Humidity --- ความชื้นสัมพัทธ์ มีหน่วยเป็น %
- Rotation Vector --- เวกเตอร์การหมุน
- Temperature --- อุณหภูมิเครื่อง มีหน่วยเป็น $^{\circ}C$
- Battery: Temperature, Level, Voltage

Sensors on Android

This coordinate system is different from the one used in the Android 2D APIs where the origin is in the top-left corner.

4

<http://developer.android.com/reference/android/hardware/SensorEvent.html>

Layout

GPS

- ✓ LocationManager
- ✓ LocationListener

Sensors

- ✓ SensorManager

```

5 <uses-permission android:name="android.permission.ACCESS_FINE_LOCATION" />
  <uses-feature android:name="android.hardware.location.gps" />

```

Location by using GPS (1/3)

```

1 public class MainActivity extends AppCompatActivity implements SensorEventListener {
2     private static final long MINIMUM_DISTANCE_CHANGE_FOR_UPDATES = 1; // in Meters
3     private static final long MINIMUM_TIME_BETWEEN_UPDATES = 1000; // in Milliseconds
4     LocationManager locationManager;
5     LocationListener locationListener = new LocationListener() {
6         public void onLocationChanged(Location location) {
7             String message = String.format("New Location \n Longitude: %1$s \n Latitude: %2$s",
8                 location.getLongitude(), location.getLatitude());
9             TextView text=(TextView)findViewById(R.id.textView);
10            text.setText(message);
11        }
12    }
13    ...
14    public void onProviderDisabled(String s) {
15        String message = "Provider disabled by the user. GPS turned off";
16        TextView text=(TextView)findViewById(R.id.textView);
17        text.setText(message);
18    }
19    public void onProviderEnabled(String s) {
20        String message = "Provider enabled by the user. GPS turned on";
21        TextView text=(TextView)findViewById(R.id.textView);
22        text.setText(message);
23    }
24 }

```

Location by using GPS (2/3)

```

1 protected void onCreate(Bundle savedInstanceState) {
2     ...
3     locationManager = (LocationManager) getSystemService(Context.LOCATION_SERVICE);
4     if (locationManager.isProviderEnabled(LocationManager.GPS_PROVIDER)){
5         Toast.makeText(this, "GPS is Enabled in your device", Toast.LENGTH_SHORT).show();
6     }else{
7         showGPSDisabledAlertToUser();
8     }
9     if (locationManager != null) {
10        if ( Build.VERSION.SDK_INT >= 23 &&
11            checkSelfPermission(ACCESS_FINE_LOCATION) != PERMISSION_GRANTED &&
12            checkSelfPermission(ACCESS_COARSE_LOCATION) != PERMISSION_GRANTED ) {
13            locationManager.removeUpdates( locationListener );
14        }
15        locationManager.requestLocationUpdates(LocationManager.GPS_PROVIDER,
16            MINIMUM_TIME_BETWEEN_UPDATES,
17            MINIMUM_DISTANCE_CHANGE_FOR_UPDATES,
18            locationListener);
19    }
20    ...
21    button1.setOnClickListener(new View.OnClickListener() {
22        public void onClick(View v) {
23            showCurrentLocation();
24        }
25    });
26    ...
27    button2.setOnClickListener(new View.OnClickListener() {

29            stopLocation();
30        }
31    });

```

Handle Uncertainty Task

Location by using GPS (3/3)

```

1 protected void showCurrentLocation() {
2     if (locationManager != null) {
3         if ( Build.VERSION.SDK_INT >= 23 &&
4             checkSelfPermission(ACCESS_FINE_LOCATION) != PERMISSION_GRANTED &&
5             checkSelfPermission(ACCESS_COARSE_LOCATION) != PERMISSION_GRANTED ) {
6             locationManager.removeUpdates(locationListener);
7         }
8         Location location =
9             locationManager.getLastKnownLocation( LocationManager.GPS_PROVIDER );
10        if (location != null) {
11            String message = String.format("Current Location \n Longitude: %1$s \n
12                Latitude: 2$s", location.getLongitude(), location.getLatitude());
13            TextView text=(TextView)findViewById(R.id.textView);
14            text.setText(message);
15        }
16    }
17 }
18 protected void stopLocation() {
19     if (locationManager != null) {
20         if ( Build.VERSION.SDK_INT >= 23 &&
21             checkSelfPermission(ACCESS_FINE_LOCATION) != PERMISSION_GRANTED &&
22             checkSelfPermission(ACCESS_COARSE_LOCATION) != PERMISSION_GRANTED ) {
23             locationManager.removeUpdates(locationListener);
24         }
25         locationManager.removeUpdates(locationListener);
26     }
27 }

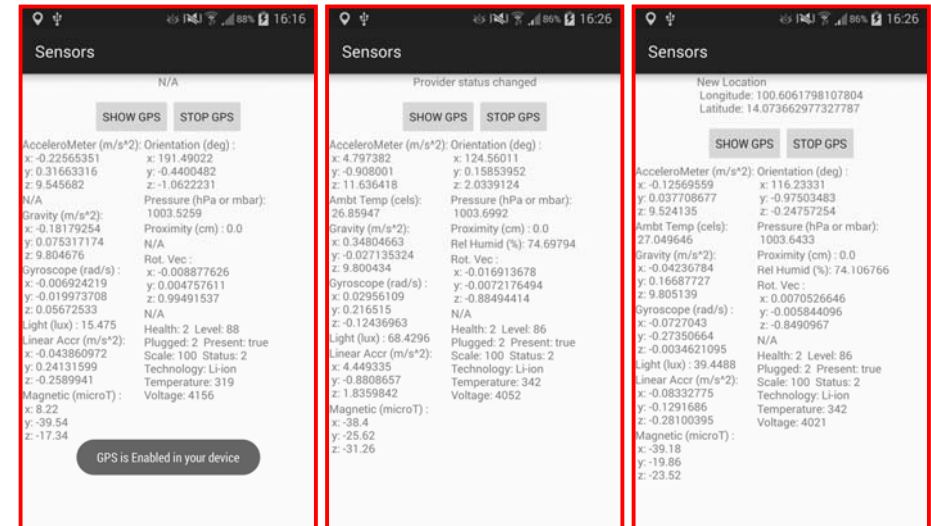

```

Location Listener

■ Location Listener ประกอบด้วย 4 methods สำคัญ คือ

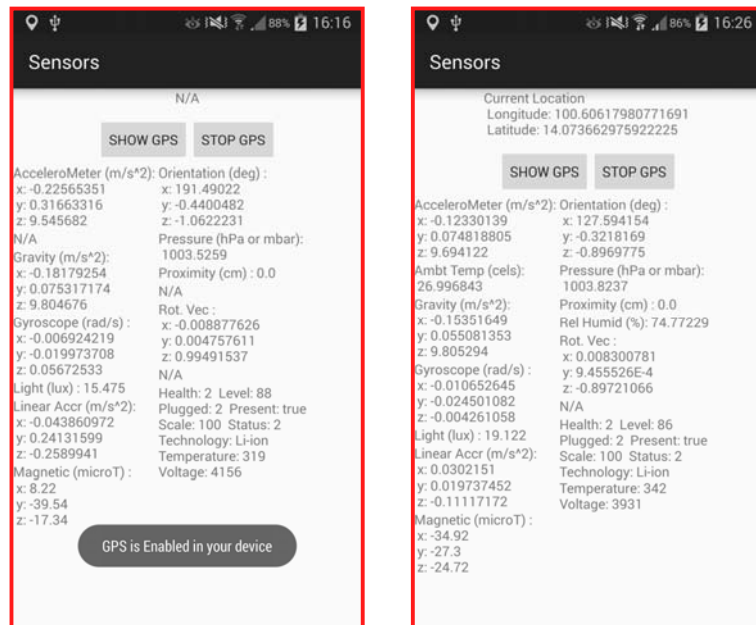

- **onLocationChanged()**
- **onStatusChanged()**
 - **OUT_OF_SERVICE**
if the provider is out of service, and this is not expected to change in the near future
 - **TEMPORARILY_UNAVAILABLE**
if the provider is temporarily unavailable but is expected to be available shortly
 - **AVAILABLE**
if the provider is currently available
- **onProviderDisabled()**
- **onProviderEnabled()**

Location by using GPS : Run on Mobile Device (1/2)

10

Location by using GPS : Run on Mobile Device (2/2)

11

Sensors

```
protected void onCreate(Bundle savedInstanceState) {
    sensorManager = (SensorManager) getSystemService(SENSOR_SERVICE);
    sensorManager.registerListener(this,
        sensorManager.getDefaultSensor(Sensor.TYPE_*),
        SensorManager.SENSOR_DELAY_NORMAL);
}

public void onSensorChanged(SensorEvent event){
    int type = event.sensor.getType();
    float x, y, z;

    if(type == Sensor.TYPE_*){
        x=event.values[0];
        y=event.values[1];
        z=event.values[2];
        String message = String.format("Accelerometer (m/s^2): \n
            x: %1$s \n y: %2$s \n z: %3$s", x, y, z);

        TextView text=(TextView)findViewById(R.id.textView1);
        text.setText(message);
    }
}
```

12

Delay

Delay

- `SENSOR_DELAY_FASTEST`
get sensor data as fast as possible
- `SENSOR_DELAY_GAME`
rate suitable for games
- `SENSOR_DELAY_NORMAL`
rate (default) suitable for screen orientation changes

13

Accelerometer

- `Sensor.TYPE_ACCELEROMETER`
 - มีหน่วยเป็น เมตร/วินาที²
 - `values[0]` : Acceleration force along the x axis
 - `values[1]` : Acceleration force along the y axis
 - `values[2]` : Acceleration force along the z axis
1. `public class MainActivity extends Activity implements SensorEventListener {`
 2. `SensorManager sensorManager;`
 3. `@Override`
 4. `protected void onCreate(Bundle savedInstanceState) {`
 5. `super.onCreate(savedInstanceState);`
 6. `setContentView(R.layout.activity_main);`
 7. `sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);`
 8. `sensorManager.registerListener(this,`
 9. `sensorManager.getDefaultSensor(Sensor.TYPE_ACCELEROMETER),`
 10. `SensorManager.SENSOR_DELAY_NORMAL);`
 11. `}`
 - 14

Accelerometer (2)

```

12. public void onSensorChanged(SensorEvent event){
13.     int type = event.sensor.getType();
14.     float x, y, z;
15.
16.     if(type==Sensor.TYPE_ACCELEROMETER){
17.         x=event.values[0];
18.         y=event.values[1];
19.         z=event.values[2];
20.         String message = String.format("Accelerometer (m/s^2): \n
21.             x: %1$s \n y: %2$s \n z: %3$s \n", x, y, z);
22.         TextView text=(TextView)findViewById(R.id.textView1);
23.         text.setText(message);
24.     }
25. }
26. }
```

acceleration =
gravity + linear-acceleration

$g = 9.81 \text{ m/s}^2$

15

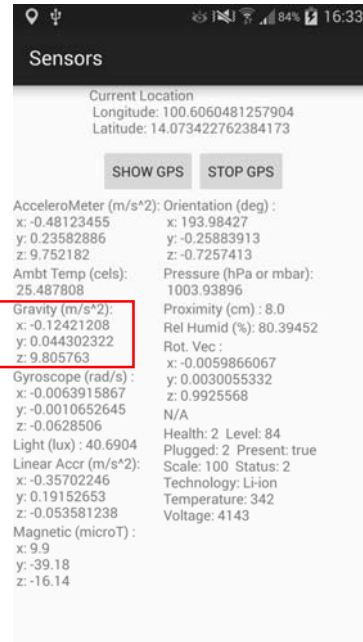

Ambient Temperature

- `Sensor.TYPE_AMBIENT_TEMPERATURE`
 - มีหน่วยเป็น เซลเซียส (Celsius)
 - `values[0]` ค่าอุณหภูมิ
1. `protected void onCreate(Bundle savedInstanceState) {`
 2. `super.onCreate(savedInstanceState);`
 3. `setContentView(R.layout.activity_main);`
 4. `sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);`
 5. `sensorManager.registerListener(this,`
 6. `sensorManager.getDefaultSensor(Sensor.TYPE_AMBIENT_TEMPERATURE),`
 7. `SensorManager.SENSOR_DELAY_NORMAL);`
 8. `}`
 9. `public void onSensorChanged(SensorEvent event){`
 10. `int type = event.sensor.getType();`
 11. `float x, y, z;`
 12. `if(type==Sensor.TYPE_AMBIENT_TEMPERATURE){`
 13. `x=event.values[0];`
 14. `String message = String.format("Ambt Temp (cels): \n %1$s \n", x);`
 15. `TextView text=(TextView)findViewById(R.id.textView2);`
 16. `text.setText(message);`
 17. `}`
 18. `}`

16

Gravity

- `Sensor.TYPE_GRAVITY`
- มีหน่วยเป็น เมตร/วินาที²
 - `SensorEvent.values[0]`
Force of gravity along the x axis.
 - `SensorEvent.values[1]`
Force of gravity along the y axis.
 - `SensorEvent.values[2]`
Force of gravity along the z axis.

17

Gravity (2)

```

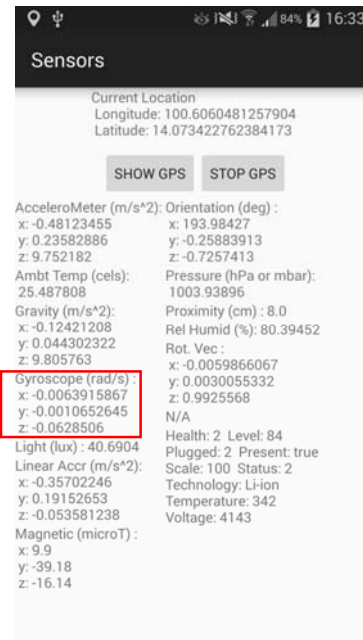

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_GRAVITY),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }

9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_GRAVITY){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Gravity (m/s^2): \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView3);
20.         text.setText(message);
21.     }
22. }
```

18

Gyroscope

- `Sensor.TYPE_GYROSCOPE`
- มีหน่วยเป็น radians/second
- Rotation is **positive in the counter-clockwise** direction
 - `values[0]`: Angular speed around the x-axis
 - `values[1]`: Angular speed around the y-axis
 - `values[2]`: Angular speed around the z-axis
- Typically the output of the gyroscope is integrated over time to calculate a rotation.

19

Gyroscope (2)

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_GYROSCOPE),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }

9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_GYROSCOPE){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Gyroscope (rad/s) : \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView4);
20.         text.setText(message);
21.     }
22. }
```

20

Light

- `Sensor.TYPE_LIGHT`
- มีหน่วยเป็น lux
- `values[0]`: Ambient light level

```

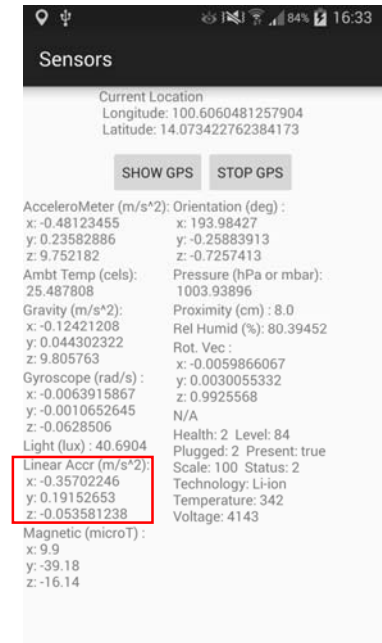

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_LIGHT),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }
9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.     if(type==Sensor.TYPE_LIGHT){
13.         x=event.values[0];
14.         String message = String.format("Light (lux) : %1$s", x);
15.         TextView text=(TextView)findViewById(R.id.textView5);
16.         text.setText(message);
17.     }
18. }

```

21

Linear Acceleration

- `Sensor.TYPE_LINEAR_ACCELERATION`
- มีหน่วยเป็น เมตร/วินาที²
- `SensorEvent.values[0]`
Acceleration force along the x axis (excluding gravity)
- `SensorEvent.values[1]`
Acceleration force along the y axis (excluding gravity)
- `SensorEvent.values[2]`
Acceleration force along the z axis (excluding gravity)

22

Linear Acceleration (2)

```

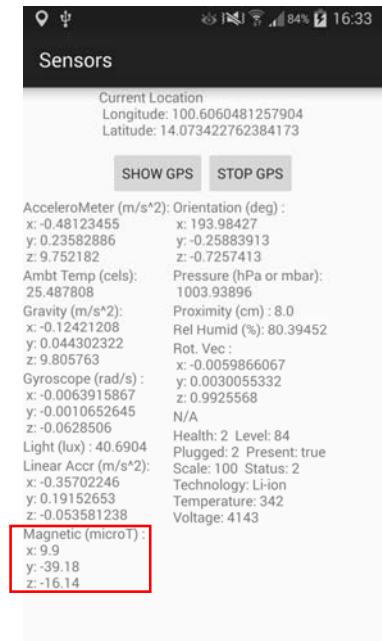

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_LINEAR_ACCELERATION),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }
9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_LINEAR_ACCELERATION){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Linear Accr (m/s^2): \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView6);
20.         text.setText(message);
21.     }
22. }
23.

```

24

Magnetic Field

- `Sensor.TYPE_MAGNETIC_FIELD`
- Measure the ambient magnetic field in the X, Y and Z axis
- มีหน่วยเป็น micro-Tesla (uT)
- `SensorEvent.values[0]`
Geomagnetic field strength along the x axis.
- `SensorEvent.values[1]`
Geomagnetic field strength along the y axis.
- `SensorEvent.values[2]`
Geomagnetic field strength along the z axis.

Magnetic Field (2)

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_MAGNETIC_FIELD),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }

9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_MAGNETIC_FIELD){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Magnetic (microT) : \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView7);
20.         text.setText(message);
21.     }
22. }

```

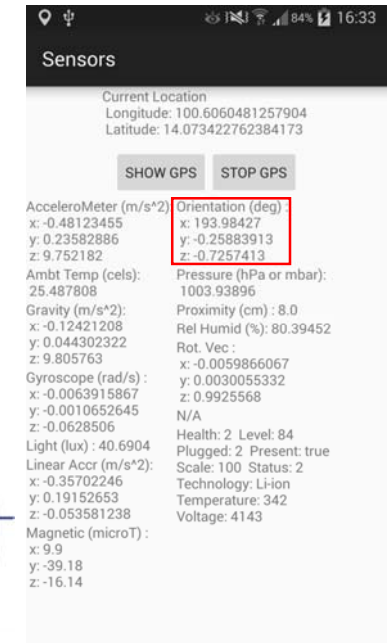

25

Orientation

- Sensor.TYPE_ORIENTATION
- มีหน่วยมุมเป็น องศา (degree)
- **วนตามเข็มนาฬิกา**
 - values[0]: around the z-axis (0 to 359)
0=North, 90=East, 180=South, 270=West
 - values[1]: around x-axis (-180 to 180)
 - values[2]: around y-axis (-90 to 90)

26

Orientation (2)

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_ORIENTATION),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }

9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_ORIENTATION){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Orientation (deg) : \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView8);
20.         text.setText(message);
21.     }
22. }

```

27

Atmospheric Pressure

- Sensor.TYPE_PRESSURE
- มีหน่วยเป็น millibar
- event.values[0]: Atmospheric pressure

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager) getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_PRESSURE),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }

9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.     if(type==Sensor.TYPE_PRESSURE){
13.         x=event.values[0];
14.         String message = String.format("Pressure (hPa or mbar): \n %1$s", x);
15.         TextView text=(TextView)findViewById(R.id.textView9);
16.         text.setText(message);
17.     }
18. }

```

28

Proximity

- `Sensor.TYPE_PROXIMITY`
- มีหน่วยเป็น เซนติเมตร
- `event.values[0]`: Proximity sensor distance
- Some proximity sensors only support a binary **near** or **far** measurement.

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_PROXIMITY),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }
9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.     if(type==Sensor.TYPE_PROXIMITY){
13.         x=event.values[0];
14.         String message = String.format("Proximity (cm) : %1$s", x);
15.         TextView text=(TextView)findViewById(R.id.textView10);
16.         text.setText(message);
17.     }
18. }
```

29

Relative Humidity

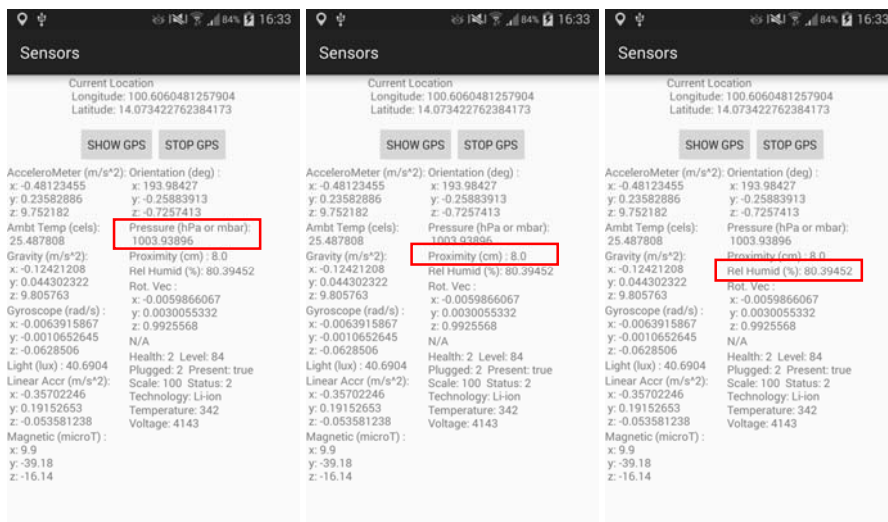

- `Sensor.TYPE_RELATIVE_HUMIDITY`
- มีหน่วยเป็น %
- `event.values[0]` ค่าความชื้นสัมพัทธ์

```

1. protected void onCreate(Bundle savedInstanceState) {
2.     super.onCreate(savedInstanceState);
3.     setContentView(R.layout.activity_main);
4.     sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.     sensorManager.registerListener(this,
6.         sensorManager.getDefaultSensor(Sensor.TYPE_RELATIVE_HUMIDITY),
7.         SensorManager.SENSOR_DELAY_NORMAL);
8. }
9. public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.     if(type==Sensor.TYPE_RELATIVE_HUMIDITY){
13.         x=event.values[0];
14.         String message = String.format("Rel Humid (%): \n %1$s", x);
15.         TextView text=(TextView)findViewById(R.id.textView11);
16.         text.setText(message);
17.     }
18. }
```

30

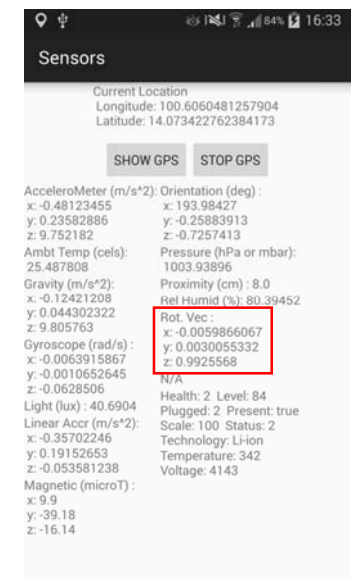

Atmospheric Pressure, Proximity and Relative Humidity

31

Rotation Vector

- `Sensor.TYPE_ROTATION_VECTOR`
- ไม่มีหน่วย
- `SensorEvent.values[0]` Rotation vector component along the x axis.
- `SensorEvent.values[1]` Rotation vector component along the y axis.
- `SensorEvent.values[2]` Rotation vector component along the z axis.

32

Rotation Vector (2)

```

1.  protected void onCreate(Bundle savedInstanceState) {
2.      super.onCreate(savedInstanceState);
3.      setContentView(R.layout.activity_main);
4.      sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.      sensorManager.registerListener(this,
6.          sensorManager.getDefaultSensor(Sensor.TYPE_ROTATION_VECTOR),
7.          SensorManager.SENSOR_DELAY_NORMAL);
8.  }

9.  public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.
13.     if(type==Sensor.TYPE_ROTATION_VECTOR){
14.         x=event.values[0];
15.         y=event.values[1];
16.         z=event.values[2];
17.         String message = String.format("Rot. Vec : \n
18.             x: %1$s \n y: %2$s \n z: %3$s", x, y, z);
19.         TextView text=(TextView)findViewById(R.id.textView12);
20.         text.setText(message);
21.     }
22. }
33

```

Device Temperature

- Sensor.TYPE_TEMPERATURE
- มีหน่วยเป็น องศาเซลเซียส (°C)
- event.values[0] ค่าอุณหภูมิของเครื่อง (Device temperature)

```

1.  protected void onCreate(Bundle savedInstanceState) {
2.      super.onCreate(savedInstanceState);
3.      setContentView(R.layout.activity_main);
4.      sensorManager=(SensorManager)getSystemService(SENSOR_SERVICE);
5.      sensorManager.registerListener(this,
6.          sensorManager.getDefaultSensor(Sensor.TYPE_TEMPERATURE),
7.          SensorManager.SENSOR_DELAY_NORMAL);
8.  }
9.  public void onSensorChanged(SensorEvent event){
10.     int type = event.sensor.getType();
11.     float x, y, z;
12.     if(type==Sensor.TYPE_TEMPERATURE){
13.         x=event.values[0];
14.         String message = String.format("Temp (cels): \n %1$s", x);
15.         TextView text=(TextView)findViewById(R.id.textView13);
16.         text.setText(message);
17.     }
18. }
34

```

Battery

- EXTRA_HEALTH
 - BATTERY_HEALTH_COLD
 - BATTERY_HEALTH_DEAD
 - BATTERY_HEALTH_GOOD *
 - BATTERY_HEALTH_OVERHEAT
 - BATTERY_HEALTH_OVER_VOLTAGE
- EXTRA_LEVEL
- EXTRA_PLUGGED
 - BATTERY_PLUGGED_AC Power source is an AC charger
 - BATTERY_PLUGGED_USB Power source is a USB port
- EXTRA_PRESENT : boolean indicating whether a battery is present
- EXTRA_SCALE : integer containing the maximum battery level
- EXTRA_STATUS : integer containing the current status constant
BATTERY_STATUS_CHARGING, BATTERY_STATUS_DISCHARGING*, BATTERY_STATUS_FULL
- EXTRA_TECHNOLOGY : String describing the technology of the current battery
- EXTRA_TEMPERATURE : integer containing the current battery temperature
- EXTRA_VOLTAGE : integer containing the current battery voltage level

```

Health: 2 Level: 47
Plugged: 0 Present: true
Scale: 100 Status: 3
Technology: Li-ion
Temperature: 378
Voltage: 3752

```

Battery (2)

```

1.  protected void onCreate(Bundle savedInstanceState) {
2.      super.onCreate(savedInstanceState);
3.      setContentView(R.layout.activity_main);
4.      this.registerReceiver(this.batteryInfoReceiver,
5.          new IntentFilter(Intent.ACTION_BATTERY_CHANGED));
6.  }

```

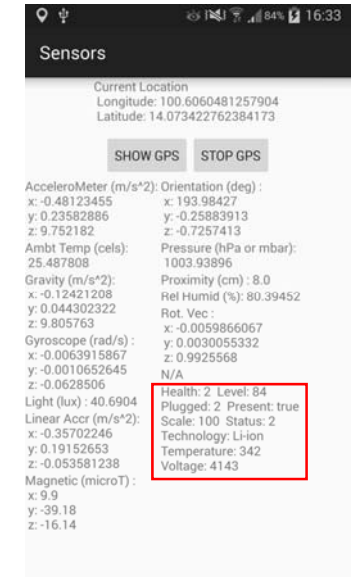

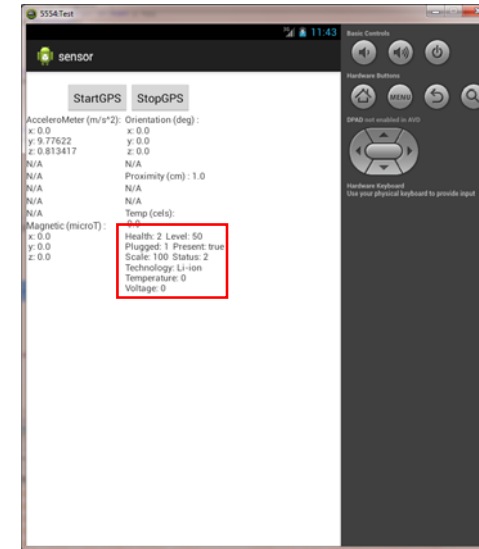

Battery (3)

```

1. private BroadcastReceiver batteryInfoReceiver = new BroadcastReceiver() {
2.     @Override

Assignment 2

ตัวเลือกที่ 1

- เกมส์เลื่อน ลูกบอล หรือ วงกลม ลงหลุม
- ✓ เขียนเครื่องเพื่อสมมติตำแหน่งของลูกบอลให้อยู่บริเวณใดก็ได้ของหน้าจอ (ใช้ Accelerometer ตรวจจับสนการเขยื้อนเครื่อง)
 - ✓ อ่านค่าจาก Sensor เพื่อควบคุม ลูกบอล ให้ไหลไปในทิศทางที่ระดับต่ำกว่า โดยมีหลุมเป็นเป้าหมาย ต้องเอียงเครื่องไปในมุมต่าง ๆ เพื่อเลื่อนลูกบอลให้ลงหลุม
 - ✓ หากมีการกลับหน้าจอจาก Portrait เป็น Landscape ตัว Application จะต้องไม่ถูก Destroy แล้ว Create ใหม่ (มีการทำ Handling Runtime Change)

ตัวเลือกที่ 2

- เกมส์ทำนายชะตาชีวิต
- ✓ เขียนโปรแกรมให้เหมือน เชียมซี เพื่อสุ่มเลือกเบอร์
 - ✓ แสดงผลการทำนายจากเบอร์ที่ผู้เล่นได้รับ

40

```

class SensorInfo{
    float accX, accY, accZ;
    float ambTemp;
    float graX, graY, graZ;
    float gyrX, gyrY, gyrZ;
    float light;
    float laccX, laccY, laccZ;
    float magX, magY, magZ;
    float orX, orY, orZ;
    float pressure;
    float proximity;
    float humid;
    float rotX, rotY, rotZ;
    float temp;
}

private Runnable pollTask = new Runnable() {
    public void run() {
        showDialog();
        hdr.postDelayed(pollTask, POLL_INTERVAL);
    }
};

```

41

Hint

สร้างคลาส SensorInfo
ไว้เก็บค่าจากเซนเซอร์ของเครื่อง

สร้างเทร็ด ไว้ตรวจจับการเขย่า

```

public void showDialog() {
    String message1 = String.format("Accelerometer (m/s^2): \n
        x: %1$s \n y: %2$s \n z: %3$s",
        sensor_info.accX, sensor_info.accY, sensor_info.accZ);
    TextView text1 = (TextView) findViewById(R.id.textView1);
    text1.setText(message1);
    ...
    if( (Math.abs(sensor_info.accX)>shake_threshold) ||
        (Math.abs(sensor_info.accY)>shake_threshold) ||
        (Math.abs(sensor_info.accZ)>shake_threshold) ) {
        if(!shown_dialog) {
            shown_dialog = true;
            final AlertDialog.Builder viewDialog = new AlertDialog.Builder(this);
            viewDialog.setIcon(android.R.drawable.btn_star_big_on);
            viewDialog.setTitle("ข้อความ"); viewDialog.setMessage("โทรศัพท์มีการเขย่า");
            viewDialog.setPositiveButton("OK",
                new DialogInterface.OnClickListener() {
                    public void onClick(DialogInterface dialog, int which) {
                        dialog.dismiss(); shown_dialog = false;
                    }
                });
            viewDialog.show();
        }
    }
}

```

42

```

@Override
protected void onResume() {
    super.onResume();

    sensorManager.registerListener(this, sensorManager.getDefaultSensor(
        Sensor.TYPE_ACCELEROMETER),
        SensorManager.SENSOR_DELAY_NORMAL);
    sensorManager.registerListener(this, sensorManager.getDefaultSensor(
        Sensor.TYPE_AMBIENT_TEMPERATURE),
        SensorManager.SENSOR_DELAY_NORMAL);
    ...
    this.registerReceiver(this.batteryInfoReceiver,
        new IntentFilter(Intent.ACTION_BATTERY_CHANGED));
    if (!wl.isHeld()) {
        wl.acquire();
    }
    hdr.postDelayed(pollTask, POLL_INTERVAL);
}

```

43

เมื่อ onResume ให้เรียกอ่านค่าจากเซนเซอร์
สถานะแบตเตอรี่ ทำให้หน้าจอสว่าง และปลุกเทร็ด

เมื่อ onPause ให้หยุดการอ่านค่า ปลดการให้หน้าจอสว่าง และหยุดเทร็ด

```

@Override
protected void onPause() {
    super.onPause();

    sensorManager.unregisterListener(this);

    this.unregisterReceiver(this.batteryInfoReceiver);

    if (wl.isHeld()) {
        wl.release();
    }

    hdr.removeCallbacks(pollTask);
}

```

44
